PURPLE MATH DILATION

Function Transformations / Translations (page 3 of 4). Sections: Basic rules, Additional rules, Moving the points, Working. I'll do the points from left to right, . Solving Proportions on MathHelp.com. In the context of ratios and proportions . Plane figures and solids can be changed (or transformed) by translation, reflection and **dilation**. The symmetry of shapes is related to translation, reflection and . A **dilation** is a transformation that produces an image that is the same shape as the original, but is a different size. • A **dilation** that creates a larger image is called . Note: Some high school textbooks erroneously use the word **dilation** to refer to all transformations in which the figure changes size, whether the figure becomes . A **dilation** is a transformation that produces an image that is the same shape as the original, but is a different. The **purple** shape is a **dilation** of the black shape. When the java applet finishes loading you can explore this geometrical transformation (**Dilation**) by moving around the blue points, or sliding the **purple** button. If one shape can become another using Resizing (also called **dilation**, contraction, compression, enlargement or even expansion), then the shapes are Similar: . Why is **dilation** the only non-rigid transformation? Remember that in a non-rigid transformation, the shape will change its size, but it won't change its shape. Jul 28, 2016 . $y=f(x)$ $y=f(x)$ $y=2f(x)$ $y=2f(x)$ vertical stretch; y -values are doubled; points get farther away from x -axis, $y=f(x)$ $y=f(x)$ $y=f(x)^2$ $y=f(x)^2$
